FIREFIGHTER I	PRACTICAL SKILL EVALUATION					
Primary Task	4-1 SELF CONTAINED BREATHING APPARATUS (SCBA) INSPECTION		JPR(s)	4.5.1		
Candidate Instruction	Conduct a pre-use operational check of your SCBA, including removing and replacing the air cylinder, announcing out loud what you are checking, what conditions you find as you proceed and indicating when you are done. Steps can be completed in any order. The evaluator may stop this evaluation at any time due to an unsafe act. Do you have any questions?				State Maximum Allotted Time 5 minutes	
PERFORMANCE STEPS			TEST 1	RETEST 2		RETEST 3
Safely performs the following steps:			P	F	P	F
Removes cylinder from pack and checks manufacturer date and hydrostatic test dates. Checks that cylinder is no less than 90% full. Check O-ring/plastic ring on high pressure airline before replacing and reconnecting to cylinder (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks to ensure that the harness system is in good condition and that all straps are in the fully extended position			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Prior to pressurization, checks to ensure that all hose connections are tight. If applicable, inspects the Universal Air Connection (UAC) to be sure it is free from dirt and debris (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
After pressurization, checks to make sure system including hoses are free of leaks (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks to ensure that the face piece is in good condition and the straps are in the fully extended position			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks that all gauges work. Cylinder and regulator gauge should read within 10% of each other and if equipped, ensures the heads-up display is working properly and coincides with the cylinder and regulator gauge pressure (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks Personal Alert Safety System (PASS) device to make sure it cycles through all phases of activation (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Manually activates PASS device (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks to ensure that all valves (i.e. bypass, mainline, exhalation) are operational. Bypass valve should be fully closed (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks cleanliness of unit			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Checks to see that low-pressure alarm is in working condition and operates at the appropriate cylinder volume (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
NO UNSAFE ACTS COMMITTED DURING EVALUATION (CRITICAL POINT)			<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Candidate must have at least 10/12 for skill and perform all critical points**

## Appendix

Each item provides additional information for Frequently Asked Questions (FAQ) and supplemental information explaining the conditions the skill should be tested under based on the standards. As well as suggestions and recommendations on how to effectively and economically test the Job Performance Requirements (JPR).

<b>4-1 SELF CONTAINED BREATHING APPARATUS (SCBA) INSPECTION</b>
Checks to see that low pressure alarm is in working condition and operates at the appropriate cylinder volume, based on the current edition of NFPA 1981: Standard on Open-Circuit Self-Contained Breathing Apparatus (SCBA) for Emergency Services. Candidates must complete each step, but do not have to complete them in the exact order listed on the skill sheet except checking the condition of seals/O rings prior to making connections.
<b>4-2 DON PERSONAL PROTECTIVE CLOTHING (PPC)</b>
Candidates must complete each step, but do not have to complete them in the exact order listed on the skill sheet.
<b>4-3 DON SELF CONTAINED BREATHING APPARATUS (SCBA)</b>
Candidate shall start with full PPE, helmet and gloves off, and hood pulled back, as the candidate should complete donning SCBA skill after completing the donning of PPC skill.
<b>4-4 CONSERVE AIR / SELF CONTAINED BREATHING APPARATUS (SCBA) FAILURE</b>
Examples of conservation of air could include staying calm, assuring good seals and no leaks, skip breathing or humming, etc. An emergency call for assistance must be initiated using a radio, pass device, and possible additional means to alert others to a fire fighter's need of emergency assistance. This should also include the term MAYDAY, fire fighter down, or comparable language as determined by the AHJ. Examples of attempts to correct the problem could include hand goes to the face piece and regulator, checking by-pass valve, uses bypass or cylinder valve to control air flow (depending on free flow or no flow as needed), assuring the air cylinder is on, etc.  <b>Warning:</b> No emergency breathing technique is recognized by manufacturers, IFSTA, ANSI, or any other regulating agency. These procedures should be used only as a last resort in life threatening situations.
<b>4-5 FIELD DECONTAMINATION</b>
Set up of decontamination at the scene shall be set up prior to the evaluation of the candidates. Under normal conditions it is appropriate to decontaminate using water with a brush. When temperatures are below freezing the candidate shall wear an SCBA and use a brush to avoid the inhalation of the fine debris and dust.
<b>4-6 FORCED ENTRY</b>
The Fire Fighter I should be able to force entry through wood, glass and metal doors that open in and out, overhead doors and windows common to the community or service area. Only one of these conditions needs to be conducted for skill testing. Candidate should try before they pry to make entry, although this is not an automatic failure. Forcible entry door simulators are acceptable for skill testing.  <b>Another candidate may be used to assist with all forcible entry testing, but only one candidate may be tested at a time.</b>  Some examples of safety issues would include not checking a door for heat before forcing, breaking a window in a manner that falling glass may strike the candidate, not securing an overhead door from closing, etc.

#### **4-7 SEARCH AND RESCUE**

When training exercises are intended to simulate emergency conditions, smoke-generating devices that do not create a threat are required. Several accidents have occurred when smoke bombs, hay or other smoke-generating devices that produce a toxic atmosphere have been used for training exercises. All exercises should be conducted in accordance with the requirements of the current edition of NFPA 1404.

Operating as a team (with a partner) the candidates may individually or both fail the skill for any of the following reasons, only the candidate/candidates that fail any of the listed items will fail the skill.

- Failure to maintain situational awareness
- Fail to maintain correct body posture
- Failure to identify building opening and features
- Failure to assist in the removal of the victim
- Failure to maintain contact with the team member physically and verbally

Candidate should be given areas to search, generally not to exceed about 300-400 square feet, but must consist of multiple room areas. Room areas may be simulated using false or simulated walls, etc. Ladders, if used are properly placed based on the conditions given. Candidate are not required to perform a ladder rescue to successfully complete this skill. A rescue dummy of a minimum of 110lbs. must be used. The charter may reduce the time based on the size of space being searched but cannot exceed 15 minutes.

#### **4-8 FIRE ATTACK - EXTERIOR**

The Fire Fighter I should be able to extinguish fires in stacked or piled materials such as hay bales, pallets, lumber, piles of mulch, sawdust, other bulk Class A materials or small unattached structures that are attacked from the exterior. The tactics for extinguishing each of these types of fires are similar enough to be included in one JPR. Dumpster or container fires are not acceptable for this skill.

Live fire evolutions shall be conducted in accordance with the requirements of NFPA 1403.

It is further recommended that prior to involvement in live fire evolutions, the fire fighter demonstrates the use of SCBA in smoke and elevated temperature conditions. In areas where environmental or other concerns restrict the use of Class A fuels for training evolutions, properly installed and monitored gas-fueled fire simulators might be substituted. \*This skill cannot be combined with 5-3\*

#### **4-10 FIRE ATTACK - INTERIOR**

Only the candidate operating the nozzle will be evaluated during each evolution. The Fire Fighter I should be proficient in the various attack approaches for room and content fires at three different levels (at grade, above grade, and below grade). Maintenance of body posture in the standard refers to staying low during initial attack, protecting oneself from falling objects and otherwise using common sense given the state of the fire's growth or suppression. Live fire evolutions must be conducted in accordance with the requirements of current edition of NFPA 1403. In areas where environmental or other concerns restrict the use of Class A fuels for training evolutions, properly installed and monitored gas-fueled fire simulators might be substituted.

Candidate shall at no time advance an uncharged hose line into the unprotected live fire area and shall not make entry until nozzle pattern and flow have been verified. These actions are critical performance safety criteria.

Scenarios:

1. Ground floor single room fire attack from interior hallway
2. Ground floor two rooms fire attack form interior hallway
3. Second floor one room fire, access from interior stairway
4. Ground floor single room fire, enter from exterior second floor (simulates basement fire)
5. Second floor one room fire, attack from ladder via window

#### 4-11 SECURE BUILDING UTILITIES

The assignment given must include inactivating both natural gas and electric utilities. These can both be simulated without active utility service connections.

When shutting down electric the candidate **should** operate the main switch and leave individual circuit breakers as found to assist in fire cause and determination. Not following this advice would **not** constitute a critical performance failure.

#### 4-12 HORIZONTAL VENTILATION

The utilization of streamers at each opening may be used to indicate sufficient air flow to assure the structure is cleared of smoke.

#### 4-13 VERTICAL VENTILATION

A roof simulator approved by the AHJ may be used but must include the use of a smoke machine. An elevated roof simulator should be used if available.

Two candidates can be evaluated simultaneously if each candidate makes 2 cuts on the ventilation opening.

#### 4-14 KNOTS AND HOISTING

Actual hoisting of the tools and equipment is not required, but weight should be applied to the tool, and the knot to insure hoisting could occur to successfully complete this skill.

#### 4-15 OVERHAUL / EVIDENCE PROTECTION

Using a wall and/or ceiling simulator with drywall inserts candidates may demonstrate opening walls and/or ceilings to check for extension. Straw can be used within the prop to demonstrate the removal of smoldering materials.

Using a Pressurized Water extinguisher (PW can), an ash bucket or metal trash can the candidate may demonstrate the removal of hot and or smoldering materials from the structure and proper extinguishment.

Protecting and/or demonstrating signs of arson may include:

- Verbalizing waiting for instructions from the fire investigator
- Identifying obvious signs of arson
- Accelerant cans
- Simulated accelerant balloons (water balloons) hanging from the ceiling
- Use of toilet paper as tracers

#### 4-16 LADDERS

The fire fighter candidate should be able to accomplish this task with each type and length of ground ladder available. This skill requires the use of extension ladders only. At the beginning of the skill the ladder may be on a fire apparatus, ladder rack or on the ground.

Only one candidate is being evaluated at a time. Any additional team members shall be directed by the candidate being evaluated.

#### 4-17 SALVAGE

Candidates may work as a team and be evaluated simultaneously for "**one**" of the first five items but must complete one of the last two water flow tasks individually and be evaluated individually.

#### 4-18 WATER SUPPLY CONECTIONS

When setting up portable water tanks and equipment and a single tank is deployed it is not necessary to set up the equipment transfer water from one tank to another.

Team members must follow the direction of the candidate being evaluated.

#### 4-19 PORTABLE EXTINGUISHERS

No simulator may be used, live fire must be used. A water can with a Class A fire may be used for skill test but all types of extinguishers must be covered in course.

<b>4-20 ROPE INSPECTION</b>
Create a general equipment/rope inspection record form for the candidate to complete. Use a 20-50 ft. section of rope. It is recommended to use section of old rope for this skill.
<b>4-21 LADDER INSPECTION</b>
Create a generic equipment inspection form to be used.
<b>4-22 INSPECT SALVAGE, VENTILATION EQUIPMENT AND TOOLS</b>
Create a generic salvage, ventilation equipment and tool inspection form to be used.
<b>4-23 VEHICLE FIRE</b>
This skill can be completed as a member of a team. Examples of unsafe acts would include: <ul style="list-style-type: none"> <li>• Not properly approaching the fire from uphill/upwind and from safe distance</li> <li>• Not attacking starting with a direct attack and widening stream pattern while advancing to vehicle</li> <li>• Not approaching at a 45 degree angle, avoiding bumpers, hood struts, etc.</li> <li>• Not maintaining situational awareness of traffic</li> <li>• Not aware of alternative fuel vehicles, CNG, Electric, etc.</li> </ul>
<b>4-24 SCENE LIGHTING</b>
Examples of unsafe acts would include not properly lifting equipment, improper location of power plant if used in a non-ventilated area, places cords or equipment in a location that creates a trip hazard, etc.
<b>4-25 COMMUNICATION</b>
N/A
<b>4-26 HOSE LOADS</b>
For all 3 hose loads check couplings for gaskets while loading.
<b>4-27 HOSE INSPECTION</b>
Cleaned hose section must be at least 1 ½" diameter and at least 25 feet in length. Options for testing this skill will be after live fire evolutions, after the fire hose and streams practical instruction, or with final practical skills testing.
<b>4-28 HOSE ROLLS</b>
Minimum PPE is gloves
<b>4-29 GROUND COVER FIRE</b>
Protective clothing is not PPC as used throughout the rest of this document. Some areas provide fire fighters with different clothing for ground cover fires than is worn for structural fires. This clothing can be substituted for structural protective PPC. Must be conducted under live fire conditions. Ground cover fire may be accomplished by spreading hay or straw.
<b>4-30 AIR MONITORING</b>
Conditions may be indoor or outdoor. Simulators approved by the AHJ may be used.
